

To get info from our membership database there are only 2 ways of getting it.

1. Have the membership program and database interface installed on your machine
It is required to have a Windows operating system or XP or newer and Microsoft Word and excel on your machine to run this application or ask Membership to send you the info.
2. There is a web interface to the database that only show info and will not allow anyone to update the information. It does show a lo fog membership information and only needs a browser on your machine and it does not matter what operating system is in your machine as long as you have a browser.

Access is to the DBA only at this time

To access copy this link to your browser. This access is hidden and not visible on the normal web site.

For Member info <http://memberinfo.sbccsail.org>
id = **sbccsail_master** password sail4ever

There are different screen and data shown

After logon the data will appear on your screen 50 at a time.

On the top is an Export option that will export the data to your PC in an excel or CSV format.

If one clicks the title of the field (column) the data will be sorted by that field, by default it is sorted by last name.

Next to each column title is a small blank box. This is a search filter box. If one enters "mou" in the Last Name Column filter box it will present only members with does letters anywhere in the last name. There is a reset button just under the ACTION button to reset it back (or just blank out the filter value.)

By default the export will export all records out to excel unless you are using a filter option then only those records are exported Ex (Type contains Resign)

The + symbol on the left will expand the member info to show their boats and dues paid or due. Export will not export this view however.

The filter box defaults to and record that CONTAINS what you entered. There are option to change this to NOT LIKE if required. Good example show Fleet without POWER boats
